Page 5 Team OptiMN

Figure 2C: Site Master Plan

The project sits as part of a larger master plan which is in line with the city's plan for development in the neighborhood.

It will be located near several major transit areas including a proposed light rail line south of the site.

The analyzed units sit in a larger development that will be built in two phases.

Values used for MIDS Calculator

Minimal Impact Design Standards for enhancing stormwater management in Minnesota

Best Management Practices: Storage Cistern Sizing and Details

Rainfall Collected:

Rainfall (inches) x Roof area (sq. ft.) x 0.85(Collection Efficiency) x 7.48 gal/cu. ft. x 1ft./12inch. = gallons collected

= 31.2×6438 sq.ft. x $.85 \times 7.48 \times 1$ ft./12inch = 106,425.29 Ga (Annually) We decided to use cistern, holding capacity of approx. 15,000 Ga. rainwater for site irrigation and community garden purposes. It can be three cistern with 5000 Ga each or one cistern 15,000 Ga depend on the cost.

Hybrid Energy Recovery[®]- the easy-set controls behind Accel CS efficiency!

The Accel CS Condensing Hybrid Energy Recovery Control integrates thermal purge with temperature reset for the best year-round performance and hot water efficiency.

Indicators snow purge Ir-round department a net water statum Het water statum Het water statum Het water statum Het water statum

Friendly lighted indicators show

Control panel features

Large easy-read display

> Zone Control – The primary/secondary loop option controls up to 4 separate thermostats and zones, and includes a relay for the primary loop circulator, with fast and easy setup.

SmartBoost" Comfort – Outdoor temperature reset can leave your home cold when recovering from overnight setback or whenever you tum up your hiermostat. But our Smart Boost technology automatically adjusts to make your home warm and comfortable faster.

Accel CS's rapid hot water recovery squeezes more out of your fuel dollars. Unlike systems where the boller heats up along with the tank (which can virtually *stop* the condensing operation) our advanced plate heat exchanger can run at full output while maintaining peak condensing!

Auto Express temperature settings allow quick selection for baseboard, radiators, air handlers and other sysems. Optional custom outdoor reset boiler supply temperatures can be enabled with the flick of a switch.

-

Peace of Mind! Exceptional residential lifetime limited warranty on pressure vessel and condensing energy manager!

Spec Sheet

Combi Boiler

Our plate heat exchanger vastly outperforms old fashioned coil in tank systems.

By comparison, our plate

cold water from the bottom

of the tank and feeds hot

water from the top down.

This delivers the highest

Our hot water plate

heat exchanger

maximizes condensing -

during every hot

water cycle.

efficiency through the

entire hot water cycle.

heat exchanger draws

Old fashioned tank with coil This design is inefficient because the tank heats slowly all over, even when you need only a small amount of heat or hot water.

In addition, the temperature of the system's boiler is allowed to rise above the tank's temperature, meaning there is an automatic loss of heat energy every time the boiler heat has nowhere to go, which wastes energy.

Accel CS features removable panels for very easy service if the need arises.

Accel CS features an internal pressure vessel of American made 316L domestic stainless steel

> ... plus the highest grade AL294C stainless steel for its condensate collector and flue (a rugged material originally developed for the nuclear power generating industry).

Fold down door for easy access to control options

> Hot water priority duration option

Specification Submittal Data / Panasonic Ventilation Fan

Description

Customizable Ventilation Fan shall be low sone ceiling mount rated for continuous run. Fan shall be ENERGY STAR® rated and certified by the Home Ventilating Institute (HVI). Evaluated by Underwriters Laboratories and conform to both UL and cUL safety standards.

Motor/Blower:

- Enclosed DC brushless motor technology rated for continuous run.
- Fan ventilation rates shall be manually adjustable for 50-80-110 CFM.
- Power rating shall be 120 volts and 60 Hz.
- Fan shall be UL listed for tub/shower enclosure when used with a GFCI protected circuit and used in insulated ceiling (TYPE I.C.).
- · Fan equipped with a thermal cutoff fuse
- Removable, permanently lubricated, plug-in motor.

Housing:

- Rust proof epoxy and polyester resin coating, 26 gauge galvanized steel body.
- Integrated dual 4" or 6" diameter duct adapter.
- Built-in metal flange provides blocking for penetrations through drywall as an Air Barrier, and assists with the decrease in leakage in the Building Envelope during blower door testing.
- Built in backdraft damper.
- Articulating and expandable installation bracket up to 24".

Grille:

- Attractive design using Poly Pro material.
- Attaches directly to housing with torsion springs.
- Includes a motion sensor cap for use as a cover when motion sensor Plug 'n Play™ module has not been selected.

Warranty:

• ALL Parts: 3 Years from original purchase date. DC Motor: 6 Years from original purchase date.

Architectural Specifications:

Customizable Ventilation Fan shall be ceiling mount, ENERGY STAR® rated type with built-in speed selector. Select from 50/80/110 CFM and no more than <0.3 sone as certified by the Home Ventilating Institute (HVI) at 0.1 w.g. with no less than 53/82/113 CFM and no more than <0.3/0.4/0.8 sones at .25 w.g. Power Consumption shall be no greater than 3.2/5.4/9.8 watts at 0.1 w.g. and 6.5/10.2/16.1 watts at 0.25 w.g. ENERGY STAR® rated with efficiency of no less than 15.1/15.3/11.5 CFM/watt at 0.1 w.g. and than 8.1/8.4/7.2 CFM/watt at 0.25 w.g. The motor shall be enclosed with brushless DC motor engineered to run continuously. DC motor speed shall automatically increase when the fan senses static pressure to maintain selected CFM. Power rating shall be 120v/60Hz. Duct diameter shall be no less than 4", inclusive of an integrated dual 4" or 6" duct adapter. **Plug 'N PlayTM modules** provide up to three additional features. Select from Multi-Speed with Time Delay, Condensation Sensor, LED Night Light and Motion Sensor. Fan shall be UL and cUL listed for tub/shower enclosure when used with a GFCI protected circuit. Fan can be used to comply with ASHRAE 62.2, LEED, ENERGY STAR® IAP, EarthCraft, California Title-24 and WA Ventilation Code.

DC Motor Technology:

When fan senses static pressure, its speed is automatically increased to ensure that the desired CFM is not compromised, which allows the fan to perform as rated.

DOE Zero Energy Ready Home Certification

As the certified Rater for this house, I certify this house meets/complies with all mandatory requirments of the DOE Zero Energy Ready home guidelines, including the following:

Х	Compliance with all ENERGY STAR Qualified Homes Version 3 requirements and checklists
Х	Compliance with Mandatory Fenestration Requirements
Х	Compliance with Mandatory Insulation Requirements
Х	Compliance with Mandatory Duct Location Requirements
Х	Compliance with Mandatory Appliance Requirements
Х	Compliance with Mandatory Lighting Requirements
Х	Compliance with Mandatory Fan Efficiency Requirements
Х	Compliance with Mandatory EPA Indoor airPLUS
Х	Compliance with Mandatory Water Efficieny Requirements
Х	Compliance with Mandatory Renewable Energy Ready Solar Electric Requirements
	This home was qualified via sampling in lieu of testing, in accordance with allowable sampling provisions as stated in the DOE Zero Energy Ready Home National Program Requirements

Optional Compliance for Builder Recognition

l furth	further certify that the following also apply to this house:											
YES	NO	DON'T KNOW	Optional	Home B	uilder	Com	mitments for	Recogniti	on			
				-	-					e 11	 	

*Certification under the DOE Zero Energy Ready Home permits limited exceptions to full compliance with Indoor airPLUS. Builders seeking the Indoor airPLUS label must achieve full compliance with the Indoor airPLUS Verification Checklist.

Renewable Energy Analysis

DOE Zero Energy Ready Home PV-Ready Checklist

DOE Zero Energy Ready Home National Program Requirements Mandatory Requirement 7 (Renewable Ready) shall be met by any home certified under the DOE Zero Energy Ready Home program, only where <u>all three conditions</u> of the following conditions are met. If any of these three conditions is not met, the home is exempt from requirements contained in the PV-Ready checklist.

- Location, based on zip code has at least 5 kWh/m²/day average daily solar radiation based on annual solar insolation using PVWatts online tool: http://gisatnrel.nrel.gov/PVWatts Viewer/index.html AND;
- 2. Location does not have significant natural shading (e.g., trees, tall buildings on the southfacing roof, **AND**;
- 3. Home as designed has adequate free roof area within +/-45° of true south as noted in the table below.

Conditioned Floor Area of the House (sq. ft.)	Minimum Roof Area within +/- 45° of True South for PV-Ready Checklist to Apply (ft ²)
<u><</u> 2000	110
<u><</u> 4000	220
<u><</u> 6000	330
> 6000	440

Note:

If a solar photovoltaic system is included with the home, then compliance with the Consolidated RERH checklist is not required.

These requirements were adapted from the EPA's Renewable Energy Ready Home Solar Photovoltaic Specification Guide (RERHPV Guide). For further guidance on any of the above items, this checklist notes the section of the guide. This guide can be accessed on the DOE Zero Energy Home program website at http://www1.eere.energy.gov/buildings/residential/pdfs/rerh_pv_guide.pdf

Renewa	bl	e E	Ene	er	a٧
	~ .	~ -		· ·	37

Designate a proposed array location and square footage on architectural diagram: PV 509 sq.ft. (<i>RERHPV Guide 1.1</i>)	X
Identify orientation (Azimuth) of proposed array location: PV <u>180</u> degrees. (<i>RERHPV Guide 1.2</i>)	X
Identify Inclination of proposed array location: PV <u>30.9</u> degrees. (<i>RERHPV Guide 1.3</i>)	X
Provide code-compliant documentation of the maximum allowable dead load and live load ratings of the existing roof; recommended: allowable dead load rating can support an additional 6 lbs/sq. ft. for future solar system. (<i>RERHPV Guide 2.1</i>)	X
Provide architectural drawing of solar PV system components. (RERHPV Guide 3.5)	
 Alternative: Provide home buyer with the following information: List of renewable-ready features Available free roof area within +/- 45° of true south Location of panel or blocking for future mounting of PV system components Location of Breaker or slot for future breaker in electrical service panel Copy of the PV-Ready Checklist A copy of the RERH Solar PV Specification Guide 	X
Install a 1" metal conduit for the DC wire run from the designated array location to the designated inverter location (cap and label both ends). (RERHPV Guide 3.2)	X
Install a 1" metal conduit from designated inverter location to electrical service panel (cap and label both ends). (<i>RERHPV Guide 3.3</i>)	X
Install and label a 4' x 4' plywood panel area for mounting an inverter and balance of system components. (RERHPV Guide 3.1)	
Alternative: Blocking is permitted to be used as an alternative to the 4' x 4' panel. The area designated for the future panel to mount PV components shall be clearly noted in the system documentation.	X
Install a 70-amp dual pole circuit breaker in the electrical service panel for use by the PV system (label the service panel) (<i>RERHPV Guide 3.4</i>) Alternative: Provide a labeled slot for a double-pole breaker in the electrical service.	X

4/3/2017

Caution: Photovoltaic system performance predictions calculated by PWMatts® include many inherent assumptions and uncertainties and do not reflect variations between PV technologies nor site-specific characteristics except as represented by PWMatts® inputs. For example, PV modules with better performance are not differentiated within PWWatts® from lesser performing modules. Both NREL and private companies provide more sophisticated PV modeling tods (such as the System Advisor Model at http://sam.nrel.gov) that allow for more precise and complex modeling of PV systems.

The expected range is based on 30 years of actual weather data at the given location and is intended to provide an indication of the variation you might see. For more information, please refer to this NREL report: The Error Report.

Disdaimer: The PVWatts® Model ("Model") is provided by the National Renewable Energy Laboratory ("NREL"), which is operated by the Alliance for Sustainable Energy, LLC ("Alliance") for the U.S. Department Of Energy ("DOE") and may be used for any purpose whatsoever.

The names DOE/NREL/ALLIANCE shall not be used in any representation, advertising, publicity or other manner whatsoever to endorse or promote any entity that adopts or uses the Model. DOE/NREL/ALLIANCE shall not provide

any support, consulting, training or assistance of any kind with regard to the use of the Model or any updates, revisions or new versions of the Model.

revisions or new versions of the Model. YOU AGREE TO INDEMNIFY DOE/MRE/LULIANCE, AND ITS AFFILIATES, OFFICERS, AGENTS, AND EMPLOYEES AGAINST ANY CLAIM OR DEMAND, INCLUDING REASONABLE ATTORNEYS' FEES, RELATED TO YOUR USE, RELIANCE, OR ADOPTION OF THE MODEL FOR ANY PURPOSE WHATSOEVER. THE MODEL IS PROVIDED BY DOE/NRE/LALLIANCE ''AS IS' AND ANY EXPRESS OR IMPLED WARRANTIES, INCLUDING BUT NOT LIMITED TO THE IMPLED WARRANTIES OF MERCHANTABLITY AND FITNESS FOR A PARTICULAR PURPOSE ARE EXPRESSLY DISCLAIMED, IN NO EVENT SHALL DOE/NRE/LULIANCE BE LUBE FOR ANY SPECIAL, INDIRECT OR CONSEQUENTIAL DAMAGES OR ANY DAMAGES WHATSOEVER, INCLUDING BUT NOT LIMITED TO CLAIMS ASSOCIATED WITH THE LOSS OF DATA OR PROFITS, WHICH MAY RESULT FROM ANY ACTION IN CONTRACT, NEGLIGENCE OR OTHER TORTIOLS CLAIM THAT ARISES OUT OF OR IN CONNECTION WITH THE USE OR PERFORMANCE OF THE MODEL

The energy output range is based on analysis of 30 years of historical weather data for nearby , and is intended to provide an indication of the possible interannual variability in generation for a Fixed (open rack) PV system at this location. PVWatts Calculator

RESULTS

11,260 kWh per Year *

Material		TEMPERATUR
Frame Material	Aluminum	Operating
Load Capacity	50 PSF / 2400 Pa	Module NC
Connector Type	Utility-Grade Tap	Temperatu
Wire Type	#1 or #2 AWG USE-2	SAFETY CHA
Hail Impact	1.8" direct at 68 mph	Ground-Fa
WARRANTY		Arc-Fault D
Product	25-Year	Internal Gr
	3% First Year. 0.2% Linear	NEC 2014
Power	Degradation per year after; 92,2% year-25 minimum.	UL 1703 Fir
	01	CERTIFICATIO
Max par Dallat	71	Model Listi
Pallet Size	10	UL 1741, U
Pallet Size	00 * 55	IEC 61215
Pallet Weight	2300 lb	100010101

MODULE TYPE	APEX 440	APEX 500
PERFORMANCE SPECIFICATIONS (WITH	INTEGRATED ELECTRONICS	5)
Peak Power (PMAX)	440 W	500 W
Cell Type	Poly-Crystalline	Mono-Crystalline (PERC)
Power Tolerance	± 3%	± 3%
Module Efficiency	16.8%	19.1%
Max Current Output (IMP)	7.5 A	9.1 A
Operating DC Voltage (VMP)	35 – 59 V	35-59 V
TEMPERATURE CHARACTERISTICS (BEFO	DRE ELECTRONICS)	
Operating Temperature Range	~40 to 85 °C	~40 to 85 °C
Module NOCT	46 °C	46 °C
Temperature Coefficient (PMP)	"0.42%/*C	"0.42%/*C
SAFETY CHARACTERISTICS		
Ground-Fault Detect	Integrated (Comp	atible w/Inverter GFDI)
Arc-Fault Detect	Int	egrated
Internal Ground Fault Limit	5	00 mA
NEC 2014 690.12	Integrated	Rapid Shutdown
UL 1703 Fire Rating	Type 1 Module	Type 1 Module
CERTIFICATIONS AND LISTINGS		
Model Listing Name	XT-A-440	XT-M-500
UL 1741, UL 1703	Certified	Certified
IEC 61215, EN 61730	Pending	Pending

Redundant Inverter Bus Specifi	cations		
AC Output Voltage	240 V 1Φ or 3Φ	DC Input Conductor	#2 USE-2
DC Distribution/Disconnect	Included	Mounting System	Included
Distribution Box Model	MNPV12	Full RIB Weight	111 lb
Inverter Specifications			
Inverter Model	LS700TS-240	Output Fault Current	18.19 Apk, 0.86 ms
Inverter Max Continuous Power	700 W	Total Harmonic Distortion	<4%
Max System Input Voltage (DC)	60 V	Standby Power (Night time power consumption)	<300 mW (per inverter)
AC Output Frequency	60 Hz	Enclosure Rating	NEMA 4
Power Factor	>0.95	Grid Connection	IEEE 1547
Ambient Operating Temperature	-40 to 131 °F (-40 to 55 °C)	Emissions & Immunity (EMC)	FCC PART 15; ANSI C63.4 2003; ICES-003
Storage Temperature	-40 to 185 °F (-40 to 85 °C)	Safety Class	UL 1741; CSA C22.2 No. 107.1-01

Construction Quality Assurance										
Preconstruction	Constant communication between general contractor and architects will ensure high-quality execution and a high-perfromance building. A complete set of detailed construction drawings will assure that all materials specified are correct and amounts specified are appropriate.									
	Consulations with building science and certification professionals to ensure energy efficiency and high performance across all elements									
	A geological survey preempts site work, and alerts us to conflicting existing conditions.									
	Soil contamination is a great residential concern, and remediation work may be required.									
Site Work	Soil has structural considerations as well, so well graded, inorganic gavel and sand is ideal.									
	Proper compaction of the soil must begin prior to laying and compactive gravel.									
	Slopes of the foundation are designed to be 45 degree angles for easy workability.									
	Filter fabric is installed between earth and gravel to prevent compaction into soil.									
	Proper gravel compaction must occur before rigid insulation is used for formwork.									
	Minimize gaps between XPS insulation and install temporary support for vertical XPS.									
	Stagger underslab XPS into two layers, 1" and 2"									
Foundation	Use stucco coated XPS for exterior rigid insulation and wing insulation to protect the insulation from breaking.									
Foundation	Use high compressive strength XPS (40 psi) for under footing insulation									
	Install drain tile in gravel underneath slab and slope towards sump pump.									
	Exterior drainage layer must slope away from foundation.									
	Sump pump opening in slab must be air sealed									
	Install flashing between walls and foundation and sill sealer beneath the sill plate for capillary break and wall drainage.									
	Gaps between framing and sheathing must be minimized by using graded 2x4 studs, selected specifically for straightness and structural capacity.									
Dough Comontry	OSB sheathing must be weatherproofed with continuous peel and stick membrane soon to prevent warping or swelling.									
Rough Carpentry	FSC certified wood must be used									
	Framing inspection for gaps between sheathing and framing by HERS Rater									
	Oversize window rough opening to allow for sloped sill and expanding foam sealant between window and rough opening.									
	Peel and stick membrane, and flashing must be established prior to window installation.									
Windows	The sides of the peel and stick membrane will be flashed in, and there will be a pan flash must be installed.									
	Sealant between trim and cladding to minimize water penetration.									
	Use beveled siding to create slope sill and flashing installed under window and integrated with peel and stick membrane									
	Furring strips are installed over the rigid installation to provide back ventilation of siding.									
Weatherproofing	Roof rigid installation installed in 2 layers and staggered to minimize thermal bridging.									
	Install furring strips over rigid insulation to provide ventilation for shingles.									
Cavity Insulation	Install cavity insulation without compression or voids									
	Insulation Inspection by HERS Rater									
HVAC	Assure all ducts are properly sealed with mastic during installation.									
HVAC	Inspection of HVAC appliances occur after rough ins.									
Plumbing	Plumbing rough inspection and final inspection for proper pressure and flow									
Electrical	Electrical inspection rough in and final inspection for proper wiring and fire stops									
Landscaping	Exterior perimeter of site surrounded by silt fence, and bioswale in middle of site surrounded by silt fence									
	Blower door test and infrared analysis for infiltration levels by HERS Rater									
Final Approval &	Duct Blaster test for duct leakage assessment by HERS Rater									
Certification	Ventilation flow verification by HERS Rater									
	Hot water test- no more than 0.5 gal to achieve a 10 degree rise by HERS Rater

11 Bassett Creek ReGen Homes Homeowner Guide

Welcome Home!

Congratulations, you are a homeowner!

Owning a home is a big investment and a big responsibility. It's important to identify key maintenance tasks and take care of important safety issues right away so you can prevent problems before they occur.

Small maintenance expenses can save you big bucks in the long run. Regular maintenance ensures everything that looks fine is also working fine.

It is important to mention that as part of a Homeowner Association, you won't be required to do maintenance on exterior features of your unit. The Homeowers Association will take care of the maintenance of the exterior facade and the upkeep of the landscape.

Table of Contents

A. Safety

B. Hazards: Protect People

C. Electricity, Water and Gas

- D. Basic ongoing Maintenance
- E. Seasonal Maintenance

A. Safety

In order to make your home as safe as possible by checking these four important things:

Smoke & Carbon Monoxide Detectors

Smoke detectors are crucial! About 62% of home-related fire deaths occur because the home did not have working smoke alarms. Fire safety experts recommend you have a smoke detector on every floor of your home and at the top of your stairs. Also, make sure every room with a fuel-burning appliance (e.g. furnace, boiler, water heater) has a smoke detector nearby. Finally, we recommend you put a detector inside each bedroom (or directly outside). When you mount the alarm, remember that smoke rises. Place the alarm on the ceiling or as high as possible on the wall.

Ground Fault Circuit Interrupters

A GFCI (ground fault circuit interrupter) will immediately stop the flow of electricity if it senses the slightest change in the current, which prevents electrocution. Make sure GFCI outlets are installed near sinks — both bathroom and kitchen — and in the laundry room.

B. Hazards: Protect People

A number of substances that are toxic to humans may be present without you knowing it. Take the time to check for these substances as soon as possible.

Radon

Radon comes from the natural decay of uranium, which is found in most soils. It usually enters houses through cracks or holes in the foundation. Radon itself is actually a harmless gas, but as it decays it releases radioactive particles that are absorbed into your lungs and can cause lung cancer. Radon is estimated to be the second highest cause of lung cancer in the U.S., and is a potential problem in every state.

Your house is equipped with a radon a passive sub-slab depressurization system is being proposed to mitigate radon and other soil gases. This system will produce a slight negative pressure below the slab, especially in winter months, to create a suction point for soil gas removal. Inspect the outside exhaust vents from your system to make sure that leaves and other debris are not clogging the pipe.

Mold and mildew

Mold and mildew isn't just a problem found in old homes. Mold loves to grow in warm, wet spaces. There are about 50 species of mold that are toxic to humans and lead to respiratory problems and fungal infections. Mold can be difficult to find because it often grows in areas you can't see, like inside your walls. Do a quick check for mold in spaces that may have consistent contact with water (under the sink, around the bathtub). Your house comes with exhaust fans on each bathroom. It's a good idea to use your bath fan after each shower to remove damp air from the bathroom and avoid mold and mildew. It's important to consider that exhaust fans can typically collect dust, reducing their efficiency. Simply dusting or replacing if damaged can increase its efficiency.

C. Electricity, Water and Gas

There are a number of critical systems in your home (such as the main electrical panel and water meter) that are important to understand. Make sure everyone in your family is aware of what these systems do and—if appropriate—know how to turn them on and off.

Electrical Panel (Fuse Box)

The fuse box protects your electrical circuits by cutting off the power if the current becomes too high (commonly known as a "blown fuse"). The most common reason to interact with your electrical panel is because you blew a fuse or need to turn off all power to your home. It's a good idea to figure out which outlet each circuit connects with. The map of the panels will be attached to it. The main disconnect breaker or fuse is usually marked "main" and located near the top of the box. Turning it off shuts off all power to the house. If a circuit breaker or a fuse keeps "blowing" then something is wrong with your electrical system and you should call an electrician as soon as possible. Water Meter

You can usually find the water meter wherever water service enters your entire unit. Usually there are shut-off valves on either side of the water meter. To turn your water off, either turn the valve so that it's perpendicular to the pipe (which is the "off" position) or turn it clockwise until it won't turn anymore. This valve will shut off the water to your entire unit. This is necessary if you are doing major plumbing work, such as a frozen pipe repair, or you are leaving your house for an extended period of time. For plumbing fixes to specific fixtures (such as the sink or toilet) there will be a local shutoff valve you can use. Take a look at each local shut off valve for your sinks and toilets. Make sure you can turn them on and off easily. If they are extremely rusty, wet to the touch, or won't turn off, they should be replaced.

C. Basic ongoing Maintenance

Now, it's time to cover some smaller issues that require a basic check or consistent maintenance. This is not intended to be a comprehensive maintenance list! We just want to highlight the routine maintenance tasks that can have the biggest impact on your health, safety and budget.

Furnace and HVAC System - Service and Filter

Make sure you change your furnace filter regularly to keep the air in your house clean and your furnace running properly. Different filters need changing at different times. Dirt causes over 80% of premature furnace failures. According to the EPA, indoor air is generally found to be 2-5 times more polluted than outdoor air due to the presence of chemicals found in many household such as cleaners. HVAC systems require regular check-ups. Catching HVAC problems early will save you from needing a costly replacement.

D. Seasonal Maintenance

Most of the ongoing maintenance tasks we've mentioned can be done at any time of year, as long as they're done consistently. However, there are a few issues that are season specific, like gutters.

Gutters and roof valleys

Gutters should be cleaned twice a year: Once in mid to late fall (when most of the leaves have already fallen) and again in early spring (to clear any debris that may have accumulated during winter). Clogged gutters can ruin them if left untouched, and may lead to water entry through the foundation or roofing. Simply removing debris with a trowel and then rinsing with a hose can prolong the gutter's life greatly. Check to make sure the flashing on the roof is in good condition as well.

PV maintenance

Once your PV array is installed, little system maintenance is required. The modules have no moving parts and usually carry a warranty of at least 20 years. Regular rainfall is often sufficient to eliminate dirt accumulation, but where rain is infrequent, occasionally rinsing the modules off with water will restore power operation and optimal sun exposure. During winter months, snow should be able to slide off or melt.

Inspect/Replace Bathtub and Toilet Caulking

Caulking prevents leaking water from escaping from creases in the bathtub and toilet. Replacing cracked or peeling caulking can prevent mold and other damages to the bathroom. Replace cracked caulking with polyurethane caulk around the edge of tub, points where faucets protrude from the wall, and the toilet seal.

Clean/Replace Kitchen Exhaust Fan Filters

Kitchen filters typically become clogged with grease every month and will cause the system to run less efficiently. Cleaning can be as simple as putting the filters in the dishwasher.

Flush Water Heater

To prolong the lifetime of the water heater, sediment must be flushed twice a year. The sacrificial rod should also be inspected every 2 years and replaced if worn. Specific flushing instructions can be found in the user manual.

Programmable Thermostat

Programmable thermostats can do wonders in decreasing utility bills by decreasing heating and cooling at certain times and places in the house. This replacement is quick and easy but programming must be checked periodically.

Shorten Showers

Shortening showers can be relative to the user but will conserve water and reduce water bills. Also, low flow shower heads can be used to add to energy savings. These can be replaced simply by twisting off and replacing.

Inspect/Replace Window Caulking

A lot of heat is lost through cracks on the casing and sill of a window. Replacing the caulk with caulking with high joint movement can be more durable in the long term. When replacing, make sure surfaces are clean and dry and begin when the temperature is leveled out in the afternoon.

Touch-up Exterior Painting

Exterior paint can serve as a protective barrier from rust for gutters and wood siding. Sand, prime, and paint over any noticeable cracked or peeling paint to ensure a beautiful and protective coating.

Seal Paving

Patching cracks will prevent future potholes by preventing water seepage. Caulk any cracks using a patching gun and smooth with a putty knife. Reseal the driveway every five years using a bucket of sealant and a driveway brush.

Install Efficient Appliances/ Power Strips

Power strips must be used with appliances to limit the energy used during the appliance's standby mode. This can save a lot of energy and decrease bills. LED or CFL light bulbs and ENERGY STAR appliances can also save money on the energy bill because they are more efficient.

Task	Instructions	As Needed	Monthly	Yearly	Spring	Summer	Fall	Winter
Smoke and Carbon Monoxide Detectors	Inspect and Test							
Ground Fault Circuit Interrupters (GFCI)	Inspect							
Radon Depresurization System	Inspect and Clean Vent							
Mold and Mildew	Inspect							
Electrical Panel	Inspect							
Water Meter	Inspect							
Furnace and HVAC Systems	Service and Clean							
Furnace and HVAC Filters	Inspect and Replace							
Gutters and Roof Valleys	Inspect and Clean							
PV Maintenance	Inspect and Clean							
Bathtub and Toilet Caulking	Inspect and Replace							
Kitchen and Bathroom Exhaust Fans	Inspect and Clean							
Water Heater	Flush							
Programmable Thermostat	Inspect and Reprogram							
Showers	Shorten							
Window Caulking	Inspect and Replace							
Seal Paving	Inspect and Replace							
Efficient Appliances & Power Strips	Inspect							

Air intake

The air intake for your ventilation system will require occational cleaning. Look for this intake about 10 feet off the ground.

Water service

Water service will enter the building here.

Electrical box Look for the electrical box on the wall of the mechanical room.

Energy Recovery Ventilator (ERV)

This is critical to the air quality of your home. Filters must be checked and replaced every season.

Water heater

The water heater is located inside the mechanical room. It should be flushed every 6 months

Boiler

The boiler needs to be serviced by a professional every 1-2 years.

Mechanical room

The air handler which provides warm and cool are to your home is located here. The is an air filter that will need to be replaced every 6 months.

PV panels

Your home is equipped with Solar Panels. There is an electrical box which provides a shutoff for maintenance in this attic.
